(54) Title: CHARACTERISING BODY TISSUE

(57) Abstract: The present invention describes a method for analysing body tissue, the method consisting of obtaining data representing a first measured tissue property of a body tissue sample and obtaining data representing a second, different tissue property of the tissue sample, and using the data in combination to provide an analysis of the tissue sample. A method is also described for characterising body tissues as normal or abnormal. The present invention also describes a method for analysing and/or characterising body tissue by obtaining Compton scatter data measured from a body tissue sample on which a penetrating radiation beam is incident and using the data to provide an analysis and/or characterisation of the tissue sample.
